

## Digitizer

Precision Digitizer—Basic Edition is a true 32-bit application designed to take advantage of the features and benefits of Microsoft® Windows® 95/98 and NT™. The software is easy to use while providing a powerful estimating environment using the latest in digitizing and color graphic display technology. It completely replaces the mouse for operation of Precision estimating and all digitizer functions.

Precision Digitizer's sophisticated programming gives you state-of-the-art capabilities with fewer pen strokes. Curves can be traced without switching digitizer modes, and area shapes are closed automatically.

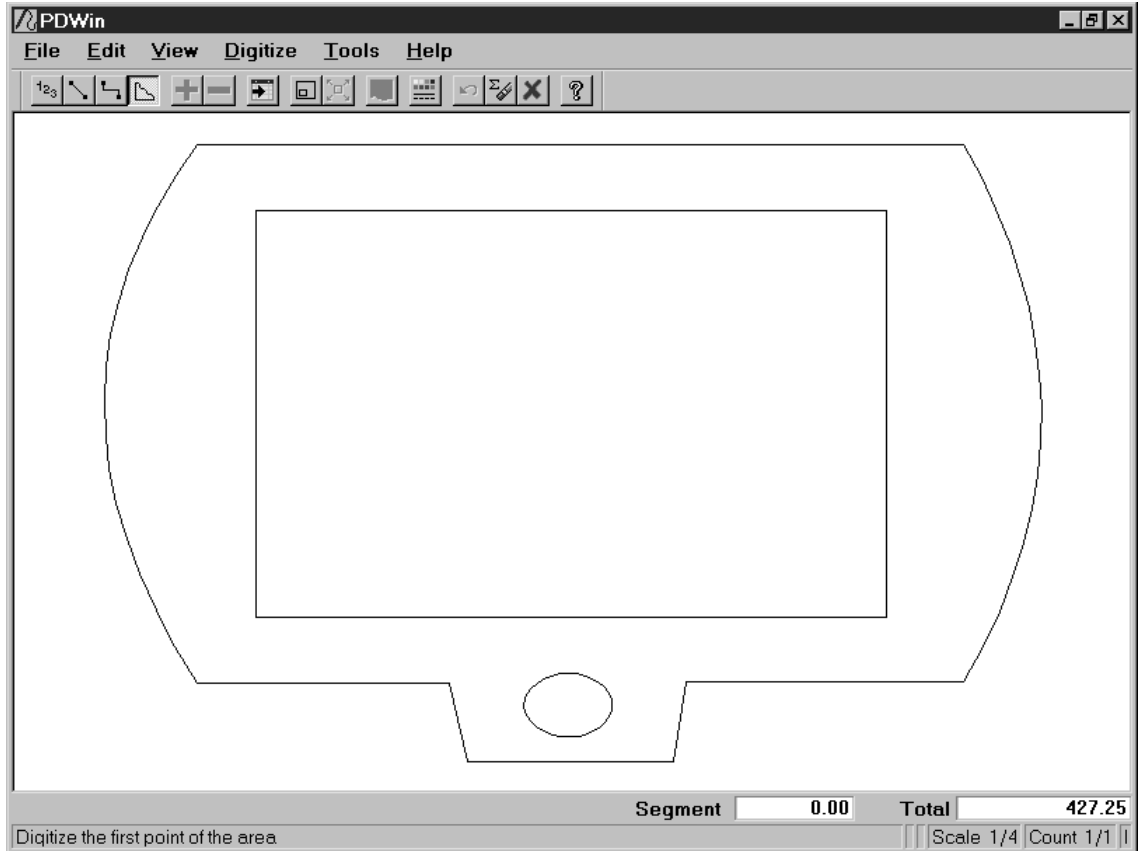

The software also displays all areas, lengths and counted points graphically on the screen for instant identification of errors and omissions. And the screen areas can be sized so you can see the smallest of details. Images can also be printed and saved for future use.

Precision Digitizer is compatible with virtually any digitizer hardware that uses a 32-bit WinTAB driver. Its exclusive design optimizes digitizer performance for maximum speed, efficiency and productivity during takeoff.

### Features

- Four digitizing functions allow you to count objects and to digitize single lines, continuous lines and areas
- Full on-line help with reference style help, cue cards and "Show Me" demos
- Automated interface to Timberline's Windows-based Precision Estimating software
- Quickstart mode—Precision Digitizer starts in the appropriate digitizing mode (count, single line, continuous line or area) based on the Precision Estimating variable
- Digitized totals can be returned to any numeric field in the Windows-based Precision Estimating software
- Displays a color graphic image of all digitizer input for easy identification of errors and omissions
- Provides complete control of line color and line style
- Precision Digitizer (and the WinTAB driver) can be used in place of the mouse
- Accurate up to 1/1000" (depending on the digitizer model)
- Automatically closes shapes when tracing areas
- Saves and recalls perimeters to Windows-based Precision Estimating
- Scaling capabilities include:
  - Imperial and metric scaling
  - Plain and engineering scaling
  - Automatic scaling based upon a specified length
  - Count scaling
  - Separate vertical and horizontal scales
- Compatible with most popular digitizers including:
  - CalComp
  - GTCO
  - Numonics
  - Summagraphics
- Supports hundreds of printers
- Precision Digitizer is built to use the WinTAB specification, an industry standard.

The software offers a variety of digitizing features, including counts, lengths and areas.

**Precision Digitizer—Basic Edition** is part of Timberline's Precision Collection—a full line of estimating products based on Timberline's more than 25 years of experience on the leading edge of construction software technology.

Precision Digitizer Basic interfaces with Precision Estimating—Standard and Extended Editions.
